DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The rejection of claims 1-6 under 35 U.S.C. 112, second paragraph, is withdrawn in view of Applicant's amendments.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1 and 3-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Futamoto et al. (US 6562453).

Futamoto et al. disclose a magnetic recording medium having in order a layer formed from CoCrPtNb wherein the Pt in this layer meets the claim limitation directed to a noble metal, a non-magnetic layer formed from a material selected from a group including Ti, Zr and Hf, and a (100) MgO layer (examiner notes that (100) is the equivalent of (001)). The thickness of the Hf film given in example 2 is 3 nm. See col. 2, lines 50-57; col. 3, lines 27-42; col. 4, lines 34-47; col. 5, line 51 to col. 6, line 4.

Art Unit: 1794

4. The rejection of claims 1 and 4-5 under 35 U.S.C. 102(e) as being anticipated by Lee (US 7108926) is withdrawn in view of Applicant's amendments.

Allowable Subject Matter

5. Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

6. Applicant's arguments filed 7/29/08 have been fully considered but they are not persuasive. Applicant maintains that Futamoto teaches the use of MgO to increase perpendicular magnetic anisotropy and not for the purpose of reducing substrate temperature.

Applicant's argument is moot because the claims do not require any particulars associated with the reduction of substrate temperature. The Futamoto reference teaches the claimed structure and composition. As such, the rejection under 102(e) in view of Futamoto has been maintained.
